

SAFsolution™ Workstation

Edition replaces passwords

with biometric authentication,

a more reliable form of

identity verification, for

a simple convenient

biometric security solution.

WORKSTATION SECURITY THROUGH BIOMETRIC AUTHENTICATION

SAFsolution™ Workstation Edition eliminates the inconvenience of text-based passwords by using biometric authentication, a more reliable form of identity verification. Users concerned with information security or remembering passwords will find this product an uncomplicated, easy-to-install alternative to text-based passwords. Features include:

- **A Practice Utility which allows users to practice biometric enrollment and verification prior to activating biometric security.**
- **Configuration for multiple users on a single workstation.**
- **A screensaver feature which allows users to utilize biometric security in place of passwords.**
- **Fast Logon option that replaces the network login window with a fast, convenient biometric logon. Simply scan and go!**

FLEXIBILITY AND ACCESSIBILITY

SAFsolution installs on any computer running Windows® 2000/NT/XP Professional. It enables biometric access to local machines and LAN-based networks and works with a wide variety of biometric hardware devices – fingerprint scanners as well as voice, iris, and facial recognition devices (available separately from SAFLINK). Our partnership with leading biometric service providers maximizes product flexibility and offers an integrated solution to fit your security needs.

WHY BIOMETRICS?

Biometrics eliminate the problems associated with text-based passwords by identifying human characteristics such as voiceprint, fingerprint, iris pattern and facial contours, which are virtually impossible to duplicate. Biometrics make it more convenient for end-users to access their computer accounts, while maintaining a secure method of user authentication.
