

## The Q™

### Private Information

- Secure.
- Protected.
- Convenient.

Encrypt and lock all of your usernames and passwords - your fingerprint is the key.

## Biometrically protect your private information – and do it with ease!

You can now use the same technology that is used by banks and credit unions across America. This protection and convenience is now available for all of us to use affordably.

### What can The Q™ do for you?

- Log on to your computer using unalterable fingerprint recognition.
- Log on to multiple software packages and Internet web sites without having to remember PINs and passwords.
- Eliminate the risk associated with writing all of your passwords and PINs down in a non-secure fashion.
- Take advantage of "Single Sign-On" capability. Once logged onto a computer, you can automate the log on process for Internet web sites or software programs that require passwords and PINs.
- Prevent the theft of your identity.
- Protect your assets.
- To control access to a computer, assign one or multiple fingerprint profiles to each user account. For example: There can be a user account set up on the computer in which the parents' fingerprint profiles are set up to log on to the computer and also have access to their online 401k and banking web sites. A child could have a separate user account in which the child's fingerprint cannot open that banking or 401k web site. It's that flexible and simple to control.

### Prevent the theft of your private information.

Password overload, a common symptom of the information age, leads to security lapses as passwords and PINs are lost, forgotten, written down and compromised in a variety of ways. The Q™ uses fingerprint biometrics to unlock your encrypted usernames and passwords.

### How many computer and Internet passwords do you have to remember? 10? 20? 30?

The Q™ fingerprint identification is the simple to use, secure, and convenient alternative to remembering passwords, usernames and PINs. Cost-effective, easy to maintain, and user-friendly, The Q™ offers the ultimate protection for access to sensitive and personal information on web sites. Whether you have 5 passwords or 500 to remember, now you can literally forget all of them - simply use your fingerprint instead! With the click of a mouse, your passwords and usernames can be encrypted, stored, and then unlocked by simply placing your finger on the reader.

The Q™ adds another layer of security in a simple manner to ensure the numerous passwords and PINs you use for computer log on, Internet web sites and software packages aren't compromised.

## **The Q™**

**Private Information - Secure. Protected. Convenient.**

### **The biometric solution designed for your convenience.**

Use The Q™ for replacing the typing of required usernames, passwords, and PINs for items such as:

- Computer log ons.
- Web site passwords, PINs and usernames.
- Software packages that require a password.

Just remember, almost as important as the security of encryption is the convenience of not having to remember passwords any longer! All your Internet and computer passwords are encrypted and then associated with an authorized fingerprint.

As it grows increasingly affordable, biometric technology is fast becoming the global standard for security and convenience because of its accuracy, reliability and simplicity.

### **Simplicity**

By definition, biometrics are unique and non-transferable. At US Biometrics, we're experts in integrating biometric technology with the needs of the individual. Always aware of the delicate balance between security and convenience, we offer a strategy to protect your private information but do so with simplicity and ease of use.

Getting started is simple. The Q™ includes easy to install software, video instruction, and a fingerprint reader with a USB connection for your computer. Within a few mouse clicks, you can begin using your fingerprint to substitute the typing of each password, username and PIN.

### **About US Biometrics**

Headquartered in Naperville, Ill., and founded in 1997, US Biometrics designs and deploys a wide range of biometric technologies for corporate, financial, governmental, healthcare, educational and residential clients who need biometric authentication. For more information about The Q™ and other biometric solutions including physical access control, network security, electronic transactions and time/attendance, call 630.922.8200 or visit us at [www.usbiometrics.com](http://www.usbiometrics.com).

### **System Requirements:**

- Windows 2003, XP, XP Home, 2000
- 233 Mhz Pentium Class CPU
- Internet Explorer 5.0 or Greater
- 64 MB RAM (128 MB RAM Recommended)
- 1 Available USB Port for Fingerprint Scanning Device
- 200 MB Available Disk Space
